

AZURE EXPRESSROUTE

Establish a direct connection to Microsoft Azure

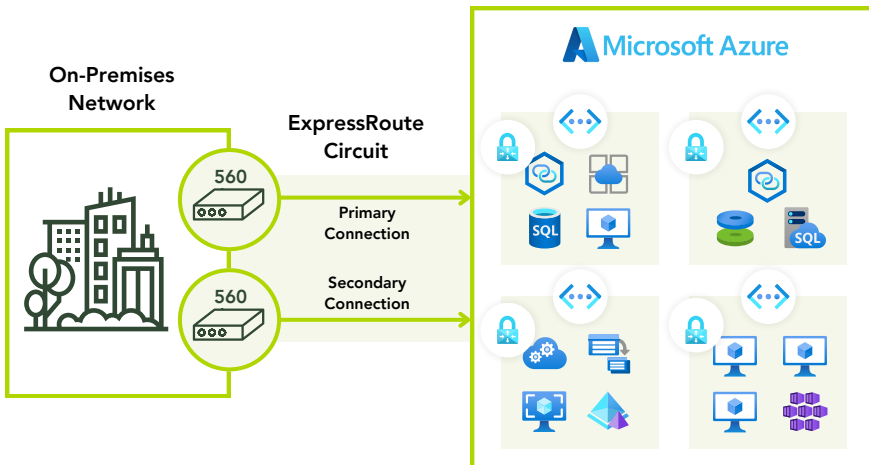

Enjoy private direct connectivity

Most vendors access Microsoft's Azure backbone through the Internet — but Momentum isn't like most vendors.

Working with us means you have a direct connection to Microsoft's infrastructure, guaranteeing fast, reliable, and private connectivity whether you're connecting data centers or on-premises infrastructure.

We're one of the few companies in the world that's both an Azure ExpressRoute Partner and an Operator Connect Provider. That means you can enjoy the increased speed, reduced latency, and enhanced connectivity of Microsoft Azure while also transforming your Microsoft Teams deployment — all while resting easy knowing you have access to 24/7 high-touch support. That's the Momentum difference.

HIGHLIGHTS

Combine Operator Connect and Azure ExpressRoute for best-in-class performance

Supports up to 100 Gbps bandwidth

MACsec physical link encryption

Full support for IPv6 workloads

Private cloud connections with support for direct WAN connection

Consistent latency with increased reliability and speed

We'll make your cloud connections fast, reliable, and private

Establish optimal cloud-to-cloud connectivity by working with a certified Azure ExpressRoute provider. Momentum maintains direct connections to Azure exchanges in Washington, Silicon Valley, New York, Chicago, Atlanta, Dallas, Los Angeles, Miami, and Seattle. Whether you want to enhance your business applications by connecting workplaces and data centers or connect directly to Microsoft's leading services, Momentum's got you covered.

Multiple connectivity options

Extend your network into the Microsoft cloud with Azure ExpressRoute, or connect directly to Microsoft's network with ExpressRoute Direct. Momentum can also link together multiple circuits and seamlessly connect any two networks.

Effortless scalability

Azure ExpressRoute's high throughput and low latency allows you to enjoy the economics and scale of the public cloud without compromising network performance. Moreover, all traffic is fully optimized via Microsoft's BGP dynamic routing protocol.

Full stack services

Combine Azure ExpressRoute with a full portfolio of complimentary solutions. Alongside Operator Connect, Momentum provides multiple ways to both optimize your network and make the most of Microsoft Teams.

Storage, backup, and recovery

With bandwidth up to 100 Gbps, ExpressRoute is a highly efficient and cost-effective option for everything from periodic data migration and replication to disaster recovery.

Enhanced deployments

With over 200 points of presence, Momentum's carrier-grade global network compliments ExpressRoute with additional visibility, security, and control.

Support hybrid app development

Build applications that span on-premises infrastructure and Azure by relying on ExpressRoute's reliable, predictable, and high-throughput connections.
