

POTS REPLACEMENT

Modernize your aging copper lines with Momentum CloudLine

Upgrade your connectivity with powerful, out-of-the-box hardware

Replace aging, expensive, and end-of-life copper lines with powerful, scalable hardware — all while utilizing existing wiring and connections.

Support new technologies and communication initiatives while streamlining the management of older systems such as fire alarms, security, elevators, emergency alerts and fax machines. Improve team productivity, service availability, and reliability to drive innovation and growth with a fully monitored and managed solution that leaves you free to focus entirely on your business.

With a wide range of different router types and access to a broad portfolio of curated services, Momentum empowers your business with everything it needs to truly modernize its phone lines.

Common use cases

- ✓ Elevator phones
- ✓ Fire alarms
- ✓ Door alarms
- ✓ ATM machines
- ✓ POS terminals
- ✓ Vending machines

HIGHLIGHTS

200+ global points of presence on a geo-redundant network

Fully PTCRB certified and compliant with regulations, including HIPAA

UL 60950-1 listed equipment from a certified MFVN provider

Multi-location data pooling for enterprises

Includes LTE with eSim support

Unlimited 5G connectivity available

Modernize legacy infrastructure with plug-and-play solutions

Eliminate obsolete and expensive copper phone lines without needing to rewire or retouch legacy infrastructure. Easily manage, monitor and support legacy devices, including elevator lines, safety alert systems, security systems, and fax lines. We also provide full visibility of devices and locations via our admin portal.

Designed for efficiency

Momentum CloudLine is fully managed with single-system technology that streamlines on-site infrastructure, integrating existing wiring and connection with minimal configuration. Your critical systems will remain operational while you're free to focus on your business.

Modular, scalable hardware

We'll send you everything you need, including a router, LTE router, gateway, and battery. Choose your hardware from a wide selection of different products, with options from 4G LTE to 5G and from 4 ports up to 100 ports — then our installation team will help you get things up and running.

Reduce overhead

Traditional POTS are both complicated and expensive to maintain. We'll help you mitigate rate hikes and reduce costs by switching to CloudLine. Better yet, you have the option of a truly unlimited 5G plan with no throttling.

Secure and compliant

Momentum Telecom operates as an MFVN, and all CloudLine-supplied equipment is UL 60950-1 listed. We're also fully certified with PTCRB, our LTE services are recognized and approved for AHJs, and customers sending ePHI are HIPAA-covered.

Adaptable coverage

With Momentum, there's no need to worry about location — we'll have a carrier network available with our eSim. Simply insert it into an LTE router, and it will connect to the strongest signal. There's no need to choose carriers or sign contracts — simply boot it, and you're online.

Multi-location data pooling

For LTE and wireless deployments, we support static IPs and data pooling. Simply choose the amount of data you want to pool with up to 10 GB per location, mix and match, and we'll take care of the rest. Even if you don't leverage our pooling option, you'll still have the hardware that supports it at no extra cost.

Why Momentum?

750+

CARRIERS AND
SERVICE PROVIDERS

7,000+

MANAGED NETWORK
CONNECTIONS
