MOMENTUM

Achieve unmatched network efficiency with SD-WAN powered by Juniper Mist AI

Embrace AI-driven connectivity

Replace expensive private circuits and eliminate hardware overhead with Momentum — the only SD-WAN solution that uses Juniper Mist.

As the world's first AI-driven wireless and wired network, Juniper Mist provides unprecedented visibility into the user experience while delivering exceptional connectivity and reliability. Provide dynamic, versatile connectivity for any use case with a high-availability network that analyzes, optimizes, and troubleshoots itself in realtime and keeps connections secure with a sophisticated, configurable embedded firewall.

Powered by Juniper Mist and backed by high-touch support, SD-WAN gives you everything you need to grow, innovate, and thrive.

It's all in the partnerships:

JUNIPER
driven by Mist AI

HIGHLIGHTS

- Combined network management with support for multi-WAN fiber and carrier Ethernet

- Site-to-site, multi-network connectivity without IPSec tunnels via Juniper's secure vector routing

- Intelligent QoS for voice applications to improve productivity without truck rolls

- Built-in LTE for out-of-band monitoring

- Optional support for 4G/LTE uplink

- Integrate leading-edge AI into your network with Juniper's Mist AI

Accelerate your transformation

Enable unprecedented agility, scale, and efficiency while lowering operational costs through Juniper's industry-leading AI. Replace time-consuming manual tasks with proactive automation and self-healing capabilities backed by sophisticated diagnostics and analytics — all managed through a single intuitive dashboard.

Ensure superior availability

Momentum runs on our universal CPE hardware, but can also be run in a virtual environment via platforms such as Microsoft Azure and Amazon Web Services. We also provide redundancy to support high-availability deployments.

Streamline troubleshooting

Automatically identify and correct issues while streamlining end-to-end-impact analyses with Marvis, Juniper's powerful AI assistant. Work with Marvis to correlate events across the LAN, WLAN and WAN for rapid, cross-domain fault isolation and resolution.

Build the ideal zero-trust network

Secure your network with 802.1X, IPSec, RogueAP detection, and more. Embrace zero trust access with a sophisticated, configurable, next-generation embedded firewall that protects your full ecosystem and not just the perimeter.

Cut bandwidth and hardware costs

Leverage Juniper's proprietary secure vector routing and advanced QoS to enable unprecedented agility, scale, and resiliency, elastically scaling services up or down as needed while eliminating the cost and complexity associated with legacy network hardware.

Focus on the user experience

Leverage insights from Juniper's SRX Series SD-WAN edge device telemetry data for real-time, AI-driven insights that indicate what kind of network experience each individual user is having in real-time.

Why Momentum?
