

SIP TRUNKING

Take Your Business to the Next Level

GET SIP SAVVY

Start Saving With a SIP Trunking Solution From Momentum

Maybe a brand new phone system isn't part of this year's budget. Perhaps your legacy or IP PBX hardware hasn't fully depreciated. That doesn't mean your business can't take a phased approach and begin migrating to and enjoying the savings of an entirely hosted solution.

That's where SIP trunk providers come in. Session initiation protocol (SIP) trunking dial tone service enables businesses that are not quite ready to eliminate previously purchased server equipment to gradually transition to a more flexible hybrid solution.

Momentum understands that businesses want to get full value out of every investment and is proud to offer a solution. Momentum SIP Trunking is a business-class service designed to deliver affordable voice over IP (VoIP) service with advanced telephony features to an existing PBX system.

And best of all, SIP Trunking isn't exclusive to IP. Even if you don't have an existing IP system, businesses can still utilize Momentum's SIP Trunking with an adapter that can hand their PBX an analog line or PRI. That means anyone can enjoy the cost-savings and feature benefits that come with choosing a well-known SIP provider.

Easy to Integrate:

- Services that work in complement to your current phone system
- Simple, fast deployment
- Local and toll free number portability
- Part of our multi-location account product line
- Voice and data network convergence
